Scholarship Opportunity in HIV Research for Minority Investigators

- Are you a member of an underrepresented racial / ethnic minority community?
- Have you earned your PhD, MD, or other terminal degree?
- Would you like to conduct independent research with a network of investigators working together to prevent the spread of HIV?

The HIV Prevention Trials Network (HPTN), a global network of HIV researchers funded by the National Institutes of Health, is proud to offer a one year scholarship program for early-career US minority investigators. This scholarship provides funding to cover a portion of scholars’ time (typically ~25%), travel to two scientific meetings, and other expenses. Applicants should be investigators who have received their terminal degree (MD, PhD, etc.) and are eager for the opportunity to work with a mentor scientist to complete a research project based upon an existing domestic HIV research study in the HPTN. Support will be provided from May 2013 through April 2014 for successful applicants, who will be selected on a competitive basis. Applications are due 30 January

Scholarship Program Goals:

1) HPTN scholars will acquire new knowledge, skills and abilities to further their careers as independent investigators in HIV science.

2) Scholars will develop and complete a research project that makes use of data from completed or ongoing HPTN studies.

3) Through the experience of the program, scholars will become knowledgeable of the process of doing research in NIH-funded HIV networks, and thereby have the opportunity to continue their careers in the HPTN after conclusion of the scholarship.

Potential Applicants are invited to view an informational webinar on the HPTN website (link below)
