Brown University Medical School has pre- and post-doctoral training opportunities in the Division of Infectious Diseases at the Miriam Hospital. A formal description of this training opportunity may be found at: http://brownmedicine.org/2/id/t32.htm

We would particularly welcome applicants interested in working on HIV prevention projects with expertise or interest in implementation science, translational research, HIVI AIDS epidemiology, geospatial analyses, geospatial epidemiology, or HIV transmission modeling. Candidates will have opportunities to apply these skill sets to HIV prevention projects that aim to address racial and geographic disparities in HIV infection, biomedical interventions, or studies examining how to reduce HIV infection among vulnerable populations such as MSM, IDUs, and individuals involved in the criminal justice system.

We provide opportunities to work with Brown University faculty members on a variety of applied projects related to HIV and HCV prevention and treatment, including translational research programs that focus on biomedical prevention interventions such as pre-exposure prophylaxis (PrEP) and post-exposure prophylaxis (PEP) in real world settings, community based interventions to improve the HIV and HCV care cascades, community based participatory research (CBPR), racial disparities in HIV infection, concurrent sexual partnerships, network transmission modeling, and engaging the African American faith community in HIV prevention. This fellowship also provides additional opportunities to collaborate with other members of the Brown/Tufts/Lifespan Center for AIDS Research (CFAR).

Postdoctoral applicants should have a PhD, MD, DDS or comparable degree.

Pre-doctoral candidates should be enrolled in a doctoral program related to the health professions and should be members of groups historically underrepresented in the sciences. See NIH policy here: http://grants.nih.gov/grants/guide/rfa-files/RFA-MD-13-002.html. Trainees must be citizens or a noncitizen national of the United States or have been lawfully admitted for permanent residence at the time of appointment.

Training and experience in research methods is required for pre and post-doctoral applicants.

Interested parties should send a CV and a brief statement about their background and research training to Jennifer Hyde jhyde@lifespan.org, with copy to amy_nunn@brown.edu.
